Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Plaque Disclosing Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of dental plaque disclosing agents was 6.51 million units, with an average price of US\$18.7 per unit. The upstream supply chain of plaque disclosing agent mainly includes suppliers of medical dyes, food-grade pigments, oral care base materials, and safety additives. Representative companies include Sensient Technologies, BASF, IFF, Merck KGaA, and Symrise. These companies provide high-purity dyes and stable carriers to ensure the developer's safety and colorfastness in the oral environment. Downstream applications are primarily concentrated in dental clinics, oral care brands, and the home care market. Dental clinics mainly use developers for oral health assessments and scaling education, while the consumer market uses plaque developing sheets, mouthwashes, and toothpaste to help users identify and remove plaque. Industry trends are characterized by more precise color development and diversified applications. Traditional single-color developers are being replaced by dual-staining and multi-layer color development technologies, which can separately display new and old plaque, providing clearer diagnostic information for personalized oral care. Driving factors include increased global awareness of oral health, the expansion of the children's and elderly oral care market, and the rise of digital oral diagnosis combined with the application of developers. The obstacles lie in the high cost of food-grade dyes, the long safety verification cycle, the slow product update speed, and misunderstandings about "dyeing" among some consumers. Another constraint is the limited frequency of use of color developers, resulting in high costs for market education and promotion. On the manufacturing end, the annual production capacity of a single line is generally between 8 million and 12 million tablets (or equivalent liquid dosage),

with an average ex-factory price between US\$0.08 and US\$0.15 per tablet. The cost per use for liquid products is approximately US\$0.1. The overall industry gross profit margin is approximately 35%-45%.

The global Plaque Disclosing Agent market size was estimated at USD 122.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
