Abstracts

A plasma arc cutting system is an industrial device that uses a high-temperature plasma arc to cut metal. It heats compressed gas (such as air, nitrogen or oxygen) into a high-temperature plasma and sprays it through a cutting nozzle at high speed to melt the metal and blow it away from the cut, thereby achieving fast and high-precision cutting. The device is capable of cutting a variety of conductive materials, including steel, stainless steel, aluminum, copper, etc., and is widely used in manufacturing, repair and construction industries. Plasma arc cutting systems are highly favored for their high efficiency, precision, strong adaptability (can cut materials of different thicknesses) and low heat-affected zone, and are a modern alternative to traditional cutting technology.

The global Plasma Arc Cutting System market size was estimated at USD 2091.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
