Abstracts

Plasma cutting equipment refers to industrial machinery that utilizes a high-velocity jet of ionized gas?plasma?generated by an electric arc to cut through electrically conductive materials such as steel, stainless steel, aluminum, brass, and copper with precision and speed. This equipment typically consists of a power supply, an arc-starting circuit, and a torch, which together produce temperatures exceeding 20,000°C to melt and expel material, resulting in clean, high-quality cuts while minimizing heat-affected zones. Available in various configurations?from handheld units for fabrication shops to computer numerical control (CNC) systems for automated manufacturing?plasma cutting systems are valued for their versatility, efficiency in cutting thick and thin materials, and relatively lower operational costs compared to laser or waterjet alternatives in many applications.

The global Plasma Cutting Equipment market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
