Abstracts

Plasma Ignition System is a technical system that generates a high-temperature plasma arc through a plasma generator and directly ignits the pulverized coal/air mixture, which belongs to oil-free ignition and low-load combustion stabilization technology. Its core components include plasma burner, plasma generator, power supply control cabinet, compressed air system, cooling water system and monitoring and control system. Through hierarchical ignition and step by step combustion to enlarge the flame, the pulverized coal is rapidly and stably burned in the burner, which is suitable for cold furnace start-up and low-load operation of pulverized coal boiler in power station.

The global Plasma Ignition System market size was estimated at USD 4592.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.20% during the forecast period.
