Report Overview:

Surface Cleaning Using Plasma in a Low Pressure Environment (vacuum) is an economical way to clean specimens uniformly and securely. Removal of contaminants from the studied substrates without affecting the overall properties of the material is one of the benefits of plasma surface cleaning method. Plasma is widely used in circuit industry, including cleaning the PCB board before coating and cleaning the lead frames during the packaging process. Plasma sample cleaning has significant advantages over other surface cleaning methods:

Applicable to a wide range of materials

Eco friendly. This method eliminates the need for hazardous chemical solvents, which saves considerable costs because it does not need to eliminate environmental hazards like other cleaning methods.

The solvents leave behind the cleaning process while the plasma cleaner is able to perform the cleaning process without any residual effect. This process destroys antioxidants, carbon residues, oils and various types of organic compounds.

Plasma surface cleaning is the best solution for microbial contamination. Many medical and manufacturing equipment depends on plasma because it is more effective than aggressive agents and organic solvents.

The Global Plasma Surface Cleaner Market Size was estimated at USD 423.23 million in 2023 and is projected to reach USD 603.77 million by 2029, exhibiting a CAGR of
