## Abstracts

Plasma surface modification service refers to a technical service that uses plasma (a state of matter composed of ions, electrons, neutral particles, and free radicals) to alter the physical, chemical, or biological properties of material surfaces without changing the bulk properties of the materials themselves. It focuses on modifying the outermost few nanometers to micrometers of a material's surface to achieve specific functional goals. Plasma surface modification service primarily targets surface properties, with key functions including: Improving wettability: Converting hydrophobic surfaces to hydrophilic (or vice versa) by introducing polar groups (such as hydroxyl, carboxyl) or non-polar groups (such as alkyl, fluorinated groups) on the surface, which is critical for applications like adhesion, printing, and coating. Enhancing adhesion: Increasing the surface energy or creating micro-roughness through plasma etching or activation, enabling better bonding between materials (e.g., improving the adhesion of plastics to adhesives or coatings). Achieving hydrophobic/oleophobic effects: Using fluorinated gases (e.g., CF<sub>4</sub>) or organic monomers, the service can form a low-surface-energy layer on the surface, making materials water-repellent, oil-repellent, or stain-resistant (common in textiles, glass, and electronic components). Sterilization and biocompatibility improvement: For medical materials (e.g., surgical instruments, implants), plasma can remove surface contaminants and introduce bioactive groups (e.g., amine groups), reducing bacterial adhesion and enhancing compatibility with human tissues. Surface cleaning and activation: Removing organic pollutants (oils, greases) through plasma etching, while activating the surface to make it more reactive for subsequent processing (e.g., bonding, plating).

The global Plasma Surface Modification Service market size was estimated at USD 2354.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.30% during the forecast period.
