Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Plasma Transferred Arc (PTA) Welding Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of Plasma Transferred Arc (PTA) Welding Powder was about 4600 tons in 2024 with average price of 95 USD/kg. Key raw materials of the product are various metal alloys. The price fluctuations of metal alloy will impact the product market. The average gross margin of the industry ranges from 25%-30%. Plasma Transferred Arc (PTA) welding powder is a family of engineered metal or metal-ceramic alloy powders—typically gas-atomized, spherical Co-, Ni-, or Fe-based compositions (e.g., Stellite/Tribaloy, NiCrBSi, Fe-Cr-B-C)—formulated for powder-fed PTA surfacing/cladding. These powders are specified by narrow particle-size cuts (about 50–180 μm for PTA feeders), tightly controlled chemistry and cleanliness (O/N/S), and good flowability, so they melt and fuse in the PTA arc to produce dense, low-dilution, metallurgically bonded overlays with high resistance to wear, galling, corrosion, and heat on steels, Ni-base alloys, and cast irons. Unlike thermal spray powders, PTA powders are designed for full fusion and metallurgical bonding.

The global Plasma Transferred Arc (PTA) Welding Powder market size was estimated at USD 437.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
