Report Overview

A plastic aerosol container is a type of packaging used to store and dispense pressurized contents in a container. It is typically made of high-density polyethylene (HDPE) or polypropylene (PP) and is designed to withstand the high pressure needed to propel the contents out of the container. Plastic aerosol containers are commonly used for personal care and household products such as hairspray, deodorant, insect repellent, and cleaning sprays. They are preferred over metal aerosol containers because they are lightweight, durable, and recyclable. However, they can be challenging to recycle due to the complex mix of materials and chemicals used in the manufacturing process.
