Abstracts

Plastic artificial casing refers to synthetic, tubular packaging materials, typically manufactured from polymers such as polyethylene, polyamide, or collagen-based plastics, which are used primarily in the food industry for the processing and packaging of meat products like sausages, salami, and other emulsified or stuffed foods. These casings are designed to provide structural integrity during filling, cooking, smoking, and storage, offering advantages such as uniformity in size, high mechanical strength, barrier properties against moisture and oxygen, and often being peelable for consumer convenience. Unlike natural casings derived from animal intestines, plastic variants allow for greater standardization, longer shelf life, and suitability for high-speed automated production lines, making them a critical component in modern food manufacturing for both fresh and processed meat products.

The global Plastic Artificial Casing market size was estimated at USD 2380.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
