## Abstracts

Plastic-bonded permanent magnets are magnetic materials made by combining magnetic powders (such as NdFeB, barium ferrite, or SmCo) with polymer binders (such as nylon, epoxy resin, or thermoplastics) through processes like injection molding, compression molding, or extrusion. These magnets offer a balance between high magnetic performance and excellent machinability, allowing for complex shapes with good dimensional stability and corrosion resistance. Due to their lower density, lightweight properties, and relatively lower cost, plastic-bonded permanent magnets are widely used in industries such as automotive, electric motors, consumer electronics, medical devices, and sensors, especially for applications requiring high precision and complex magnetic structures.

The global Plastic-bonded Permanent Magnets market size was estimated at USD 824.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
