Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Plastic Collated Nails competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Plastic Collated Nails production reached approximately 5398 K tons, with an average global market price of around US\$ 590 per ton. Plastic collated nails are a type of fastener designed for use with pneumatic or cordless nail guns, where individual nails are securely held together by a continuous, flexible plastic strip (or collation) to form a cartridge. The nails themselves are typically made of steel—often coated with zinc (galvanized) for corrosion resistance, vinyl for reduced friction, or other materials to enhance performance—and feature varying shank designs (smooth, ringed, spiral) to optimize grip in materials like wood, plywood, or composites. The plastic collation, crafted from durable, impact-resistant plastic, serves as both a carrier and a feeding system: it maintains precise alignment of the nails, allowing easy loading into the nail gun's magazine, and cleanly separates from each nail as the gun fires, with the plastic strip breaking away or detaching without leaving significant debris. This collated design eliminates the need for manual loading of single nails, enabling rapid, continuous nailing that boosts efficiency in high-volume tasks. Unlike paper or wire collated nails, the plastic strip offers flexibility, resistance to moisture, and minimal dust, making these nails ideal for both indoor and outdoor applications, from framing and sheathing to trim work and decking, where speed, precision, and reduced cleanup are priorities.

The global Plastic Collated Nails market size was estimated at USD 3185.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
