## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Plastic Fluorescent Whitening Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fluorescent whitening agents are a type of optical reaction aid, so adding them to different plastic products does not change the properties of the product itself. Plastic products that undergo thermal oxidation during processing and turn dark and yellow, or yellowing caused by prolonged exposure to ultraviolet radiation and natural oxidation reactions, are all normal phenomena. Fluorescent whitening agents have always played the role of "monosodium glutamate" in plastic processing. A dosage of a few tens of thousands can whiten and brighten plastic products, improving the appearance grade of plastics. Plastic fluorescent whitening agents are generally added to polymer powders, particles, or slices in pure form. They can be added before or during polymerization, or before high-temperature molding. Used to enhance the color of brightly colored light colored plastic products, most of them use a mixture of organic pigments and fluorescent whitening agents. Organic pigments or fluorescent whitening agents can be processed with solvents and dispersion media and added to the material before molding, mixed and heated together for molding. Whitening of plastics is the process of uniformly mixing fluorescent whitening agents into the pre molding material before compression molding. In order to achieve uniform whitening of plastics, two points must be achieved. Firstly, the fluorescent whitening agent needs to be evenly mixed into the plastic substrate, which means it needs to be added before plastic molding; The second is to evenly disperse the fluorescent whitening agent in the plastic and distribute it evenly in the melt.

The global Plastic Fluorescent Whitening Agent market size was estimated at USD

463.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
