The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Plastic Industrial Cable Gland competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Plastic Industrial Cable Gland production reached approximately 546 million units with an average global market price of around US\$ 2.1 per units, a single-line production capacity of approximately 5 million units/year, and a gross profit margin of approximately 16%. Plastic Industrial Cable Gland is a mechanical device made from high-performance plastic materials, such as polyamide (PA), designed to securely attach and seal the end of an electrical cable to equipment or enclosures in industrial applications. It provides essential functions including strain relief, environmental sealing against dust and moisture, and protection from mechanical stress, ensuring the integrity and safety of electrical connections.
