Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Plastic Optical Fiber Preform competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Plastic Optical Fiber (POF) Preform is a cylindrical rod of transparent polymer, typically made from polymethyl methacrylate (PMMA) or perfluorinated polymers, used as the precursor for producing plastic optical fibers. Unlike silica-based preforms, POF preforms are easier and less costly to manufacture, while offering flexibility, lightweight properties, and simple installation. They are commonly used in short-distance data transmission, automotive networks, consumer electronics, illumination, and industrial controls. Although they have higher attenuation than glass fibers, POF preforms are highly valued for low-cost, high-volume applications where bandwidth requirements are moderate but flexibility and ease of handling are critical. In 2024, global sales reached approximately 2.3 Kilotons, with an average global market price of around USD 109 per kg.

The global Plastic Optical Fiber Preform market size was estimated at USD 250.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
