Abstracts

Plastic packaging products refer to containers, films, wraps, and other materials made primarily from polymers such as polyethylene (PE), polypropylene (PP), polyethylene terephthalate (PET), and polyvinyl chloride (PVC) that are used to protect, preserve, store, transport, and present a wide range of goods across industries including food and beverage, pharmaceuticals, personal care, electronics, and retail. These products vary in form and function, encompassing rigid packaging like bottles, jars, tubs, and clamshells as well as flexible packaging such as pouches, bags, and shrink wraps, with key attributes including durability, lightweight nature, barrier properties against moisture and contaminants, versatility in design, and cost-effectiveness in both production and logistics.
