Abstracts

Plastic Recycled Granules are small, pellet-shaped raw materials produced from post-consumer or post-industrial plastic waste that has been collected, cleaned, sorted, melted, and reprocessed. These granules serve as a secondary raw material for manufacturing new plastic products, effectively reducing the need for virgin plastic. They can be made from various types of plastics, including polyethylene (PE), polypropylene (PP), polyethylene terephthalate (PET), and polystyrene (PS), among others. Recycled plastic granules are widely used in industries such as packaging, construction, automotive, textiles, and household goods. Their use supports environmental sustainability by promoting the circular economy, reducing landfill waste, and conserving energy and natural resources.

The global Plastic Recycled Granules market size was estimated at USD 956.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.70% during the forecast period.
