Abstracts

Plastic recycling extruders are industrial machines designed to process post-consumer or post-industrial plastic waste by melting, homogenizing, and reforming it into reusable material, typically in the form of pellets, filaments, or profiles; these systems operate through a combination of mechanical energy (generated by a rotating screw within a barrel) and thermal energy (applied via external heaters) to achieve plasticization, remove contaminants, and ensure consistent output quality, making them a cornerstone of mechanical recycling infrastructure for polymers such as PET, HDPE, PP, and LDPE.

The global Plastic Recycling Extruders market size was estimated at USD 315.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
