Abstracts

Plastic rigid pallet tanks, commonly referred to as intermediate bulk containers (IBCs), are large, reusable industrial-grade containers designed for the storage and transportation of liquids, semi-solids, and granulated substances across various industries, including chemicals, food and beverage, pharmaceuticals, and agriculture. These containers typically consist of a high-density polyethylene (HDPE) or polypropylene (PP) inner bottle, encased within a rigid, galvanized steel or plastic outer cage that provides structural integrity and facilitates safe handling and stacking during transit. Standard capacities range from 500 to 1,250 liters, and they often feature integrated valves, fittings, and pallet bases for compatibility with forklifts and other material-handling equipment. Designed for durability, chemical resistance, and compliance with international safety and hygiene standards, plastic rigid pallet tanks offer a cost-effective and efficient alternative to traditional drums and flexitanks, particularly for bulk liquid logistics.

The global Plastic Rigid Pallet Tank market size was estimated at USD 1275.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
