## Abstracts

A Zener diode is a special type of diode designed to reliably allow current to flow "backwards" (inverted polarity) when a certain set reverse voltage, known as the Zener voltage, is reached. Plastic-encapsulated Zener diodes mean that the packaging material they use is plastic. The growing use of electronic devices such as television, mobile devices, electric vehicles, etc., boosts Zener diode market development. Zener diodes are used in voltage regulators, reference elements, surge suppressors, switching applications, and clipper circuits. The adoption of different government efforts on modern power distribution and generating infrastructure are projected to drive the market forward.

The global Plastic Sealed Zener Diode market size was estimated at USD 642.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
