Abstracts

Plastic single vision lenses are a type of optical lens made from lightweight, impact-resistant plastic materials such as CR-39 or polycarbonate, designed to correct a single refractive error—either myopia (nearsightedness), hyperopia (farsightedness), or presbyopia (age-related farsightedness)—across the entire lens surface. These lenses are widely used in eyeglasses due to their durability, affordability, and versatility, and they serve as a fundamental product in the vision care industry, catering to a broad demographic of consumers seeking basic vision correction without the complexity of multifocal or progressive designs.
