Abstracts

Plate heat exchanger plates are specially used in plate heat exchangers to isolate media and perform heat exchange, and are an important part of plate heat exchangers. The main materials of plate heat exchanger plates include stainless steel (such as SUS304, 316), titanium and titanium palladium (Ti, Ti-Pd), 20Cr, 18Ni, 6Mo (254SMO), alloys (such as C276), copper (H68), etc. The selection of these materials depends on the physical and chemical properties of the medium to ensure the corrosion resistance and heat resistance of the plates. Plate heat exchanger plates are usually stamped in one step using extremely precise molds to ensure that the plates have the same precision and uniform metal point contact. This manufacturing process allows the plates to fit closely together, ensuring that the plate heat exchanger can operate normally under higher pressures and withstand the pressure shock of the system.

The global Plate Heat Exchanger Plates market size was estimated at USD 1400.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
