Abstracts

Sintered sintered corundum is a completely sintered high-performance alumina refractory raw material. Its basic preparation principle is to use high-quality industrial aluminum oxide as raw material, and use the method of rapid heating and cooling under ultra-high temperature conditions close to the melting point (2000?) to change the crystal phase structure of Al₂O₃ from loose powder structure to dense crystal structure, and its lattice is interlaced and arranged in a disordered manner in a flat plate shape, thereby obtaining special physical and chemical properties.

The global Plate Sintered Corundum market size was estimated at USD 1315.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
