### Report Overview:

Platelets are blood cells responsible for forming clots to stop bleeding from the body. When a blood vessel is injured, platelets dash to that location and form clots at the injured place and prevent blood loss. For accurate formation of clotting appropriate number of platelets are required. Platelet aggregation systems (also referred to as an aggregometer) can be used to determine how well platelets stick together. Such a test measures platelet aggregation with the use of a platelet antagonist, such as ADP, thrombin, and ristocetin.
