Abstracts

Platform lift gear box is a key mechanical equipment component. It is a device that uses the gear transmission principle to realize the lifting function. It contains multiple gears inside. When the motor drives the gear to make a rotary motion, the gear will drive the rack to make a linear motion, thereby realizing the lifting function of the elevator. It is usually installed at the bottom or middle part of the lifting equipment to provide stable and reliable power support for lifting. The platform lift gear box has a fast lifting speed, good stability, strong load-bearing capacity and durability. It is widely used in various occasions that require lifting control, such as lifting platforms at construction sites, production lines in factories, and cargo handling in warehouses. Especially in marine engineering, self-elevating drilling platforms mostly use gear rack lifting to improve lifting speed and stability and reduce platform placement costs.

The global Platform Lift Gear Box market size was estimated at USD 1024.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
