Abstracts

Platform Screen Door Systems (PSDS) are safety barriers installed along the edges of railway or subway platforms, designed to separate passengers from the track area and align precisely with train doors when vehicles are at the station. These systems typically consist of fixed panels, sliding doors synchronized with train operations, and integrated control mechanisms that interface with signaling and automatic train control systems. PSDS enhance passenger safety by preventing accidental falls, suicides, or unauthorized access to tracks, while also improving station environment management by reducing wind drag, noise, energy loss from ventilation, and litter accumulation on tracks. They are commonly deployed in metro systems, airports, and high-speed rail networks, with variations including half-height, full-height, and transparent designs tailored to operational requirements and safety standards.

The global Platform Screen Door System market size was estimated at USD 1625.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
