Abstracts

Platinum plating titanium felt for electrolyzer hydrogen production in electrolytic cells is a functional material in which a uniform layer of platinum metal is coated onto the surface of a titanium felt substrate through specific electroplating or electroless plating processes. Titanium felt possesses high specific surface area, excellent electrical conductivity, and corrosion resistance. Platinum, as a noble metal with outstanding catalytic properties, can significantly reduce the overpotential during the process of hydrogen production by water electrolysis, thereby enhancing the efficiency of the hydrogen evolution reaction.
