Playground surfacing solutions are materials and systems designed to cover the ground in playgrounds, providing a safe, durable, and supportive surface for children to play on. These solutions are primarily intended to reduce the risk of injury from falls, especially from equipment like slides, swings, and climbing structures, by absorbing impact and minimizing the severity of accidents. Common types of playground surfacing include rubber mulch, poured-in-place rubber, artificial turf with shock pads, sand or pea gravel, and interlocking rubber tiles. They vary in texture, maintenance requirements, and cost, but all aim to meet safety standards such as critical fall height specifications. Additionally, playground surfacing often enhances accessibility for children with disabilities by offering smooth, even surfaces, and can include colorful designs to engage and stimulate play.
