### Report Overview

Pleural Drainage Systems is used to drain the unnecessary fluid from the patient chest everyday. Before using the Pleural Drainage Systems for the removal of fluid from the pleural space of the chest, a pleural drainage catheter is placed inside the patient chest. Minimally invasive surgery is performed to place the pleural drainage catheter inside the chest. Pleural Drainage Systems is a kit which includes a drainage bottle, drainage pipe with flow adjuster, alcohol pads, gauze pad, and others. Pleural Drainage Systems is a sterile kit to perform the safe and effective removal of fluid from the chest. To initiate the fluid removal process, firstly dressing around the chest is removed and the tip of the catheter is cleaned with alcohol pads. After that, the tip of the catheter pad is connected to the drainage pipe of Pleural Drainage Systems. The flow adjuster is the move upwards to start the collection of fluids from the chest. After, the completion of this process, Pleural Drainage Systems is discarded in a proper way. Pleural Drainage Systems cannot recycle because it is necessary to use a sterile kit for fluid removal from the chest.
