Abstracts

A plug-in ultrasonic flowmeter is a non-intrusive device used to measure the flow rate of a liquid within a pipe by clamping externally mounted transducers that emit and receive ultrasonic signals, calculating flow velocity based on the time difference (transit-time) or frequency shift (Doppler) of these signals as they travel through the fluid. These meters are valued for their versatility, as they can be installed without process interruption, require minimal maintenance, and are suitable for a wide range of pipe sizes and materials, making them ideal for industries such as water and wastewater management, oil and gas, chemical processing, and HVAC systems where accurate, reliable flow measurement is critical without compromising system integrity.
