Report Overview

A Plunger dosing pump moves a precise amount of liquid during a specified time period yielding an accurate volumetric flow. The plunger of the plunger metering pump will extend out of the cylinder. The piston metering pump generates suction and discharge force by changing the volume inside the cylinder, and the plunger metering pump generates suction and discharge force by changing the volume outside the cylinder liner. The plunger of the plunger metering pump does not directly contact the cylindrical inner surface of the cylinder, and is generally separated by a seal.
