Abstracts

Pneumatic angular-turn actuator is an automation device that converts compressed air energy into mechanical rotational motion. It drives the internal mechanical structure through the cylinder to achieve limited angle rotation of the output shaft. Its core components include pneumatic piston, transmission mechanism, position sensor and valve position feedback module. It has the characteristics of fast response, resistance to harsh environment, explosion-proof safety, etc. Compared with electric actuators, its advantages are high power density, strong overload resistance and low maintenance cost, but it is limited by air supply and positioning accuracy.

The global Pneumatic Angular Turn Actuator market size was estimated at USD 894.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
