Abstracts

Pneumatic Direct-acting Solenoid Valves are control elements that use electromagnetic force to directly drive the valve core to achieve reversing. They are widely used in hydraulic or pneumatic equipment in automation systems. When the power is on, the electromagnetic coil generates electromagnetic force to lift the closing part from the valve seat and the valve opens; when the power is off, the electromagnetic force disappears, the spring presses the closing part on the valve seat, and the valve closes to control the flow of gas, thereby realizing pneumatic transmission and control technology.

The global Pneumatic Direct Acting Solenoid Valves market size was estimated at USD 2776.89 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
