Abstracts

Pneumatic Direct-acting Solenoid Valves are control elements that use electromagnetic force to directly drive the valve core to achieve reversing. They are widely used in hydraulic or pneumatic equipment in automation systems. When the power is on, the electromagnetic coil generates electromagnetic force to lift the closing part from the valve seat and the valve opens; when the power is off, the electromagnetic force disappears, the spring presses the closing part on the valve seat, and the valve closes to control the flow of gas, thereby realizing pneumatic transmission and control technology. Global Pneumatic Direct-acting Solenoid Valves key players include IMI Norgren, Emerson, CEME, Burkert and SMC, etc. Global top three manufacturers hold a share over 20%. The largest market is Asia Pacific, has a share about 45%, followed by Europe and North America, with around 25% and 20% market share respectively. In terms of product, Five-way SV is the largest segment, with a share over 25%. And in terms of application, the largest application is Automation, followed by Transportation and Industrial, etc. With the development of intelligent manufacturing, the requirements for refined control of process flow are getting higher and higher. As an important equipment for realizing fluid control, pneumatic direct-acting solenoid valves will have more application opportunities. With the continuous emergence of new materials and new processes, the technical level of direct-acting solenoid valves will continue to improve. Direct-acting solenoid valves will be further improved in terms of sealing performance, corrosion resistance, service life, etc. to meet more complex industrial application needs.

The global Pneumatic Direct-acting Solenoid Valves market size was estimated at USD 2783.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
