Report Overview

The pneumatic thermal insulation ball valve has good heat preservation and cold preservation characteristics, and the diameter of the valve is consistent with the diameter of the pipe, and at the same time it can effectively reduce the heat loss of the medium in the pipeline. It is mainly used in various systems such as petroleum, chemical industry, metallurgy, pharmaceuticals, food, etc., to transport high-viscosity media that will solidify at room temperature. Due to the integral structure, the thermal insulation ball valve is smaller and lighter than ordinary ball valves, and has no leakage, good sealing performance, and the jacket is welded with carbon steel pipes, which is more pressure-resistant and firmer than cast ones.

The global Pneumatic Insulation Ball Valve market size was estimated at USD 348.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
