Abstracts

A pneumatic piston vibrator is an industrial device that utilizes compressed air to drive an internal piston, generating high-frequency linear vibrations through rapid reciprocating motion; these vibrations are transmitted to surfaces or materials to facilitate flow, compaction, separation, or settling in applications such as bulk material handling, foundry operations, concrete consolidation, and screening processes, offering advantages like variable frequency control, explosion-proof operation, and minimal maintenance due to the absence of electric motors.

The global Pneumatic Piston Vibrator market size was estimated at USD 540.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
