Abstracts

Pod Boat Motor is a type of marine propulsion system that is mounted externally beneath the hull of a vessel, often integrated into a rotating pod housing. Unlike traditional shaft-driven propulsion, pod boat motors combine the propeller and steering mechanism into a single unit, allowing for improved maneuverability, fuel efficiency, and ease of maintenance. These motors are commonly electric or hybrid-powered and are widely used in yachts, ferries, and larger commercial vessels. By providing 360-degree thrust control, pod motors enhance vessel handling, especially in confined spaces, making them popular in both leisure boating and professional maritime applications.

The global Pod Boat Motor market size was estimated at USD 112.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
