### Report Overview:

POE plastic is a thermoplastic elastomer that uses metallocene catalyst to realize in-situ polymerization of ethylene and octene. Its characteristics are: the soft chain crimp structure of octene and the crystalline ethylene chain as the physical cross-linking point, making it both excellent toughness and good processability. There is no unsaturated double bond in the molecular structure of POE plastics, which has excellent aging resistance. POE plastics have narrow molecular weight distribution, good fluidity and good compatibility with polyolefins. Good fluidity can improve the dispersion effect of filler, and can also improve the strength of the weld line of products.

The Global POE Plastic Market Size was estimated at USD 2413.05 million in 2023 and is projected to reach USD 3070.94 million by 2029, exhibiting a CAGR of 4.10% during the forecast period.
