Report Overview

Point of Care Testing (POCT) refers to medical diagnostic testing performed outside traditional laboratory settings, near or at the site of patient care, providing rapid results to support immediate clinical decision-making. These tests are designed for simplicity and portability, enabling healthcare providers to assess conditions such as infectious diseases, cardiac markers, glucose levels, and coagulation status in real-time, often using handheld or compact devices. POCT is widely utilized in hospitals, clinics, emergency rooms, and even home healthcare settings, reducing turnaround times compared to centralized lab testing. The growing emphasis on decentralized healthcare, technological advancements in biosensors, and the increasing demand for rapid diagnostics?particularly during public health crises like the COVID-19 pandemic?have significantly driven POCT adoption. However, challenges such as regulatory compliance, accuracy concerns, and cost constraints remain key considerations in the market's expansion.

The global Point of Care Testing POCT market size was estimated at USD 30830.21 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.49% during the forecast period.
