Abstracts

Point Source Carbon Capture Solution refers to an integrated system designed to capture carbon dioxide (CO₂) directly from concentrated emission points, such as power plants, steel mills, cement factories, or chemical refineries, before it enters the atmosphere. It typically combines gas collection, separation, and compression subsystems, using chemical absorption, physical adsorption, or membrane separation technologies to isolate CO₂ from flue gases. Upstream, this solution depends on industrial emitters and flue gas pre-treatment systems that condition the exhaust stream for optimal capture efficiency, as well as sorbent materials, solvents, and membrane suppliers that provide the core separation media. Downstream, the captured CO₂ is transferred into compression, transport, utilization, or storage networks (CCUS) including geological sequestration sites, enhanced oil recovery fields, or synthetic fuel and material production plants. The major global companies of Point Source Carbon Capture Solution include Exxon Mobil, Aker Solutions (SLB), Linde PLC, Mitsubishi Heavy Industries, Ltd., Halliburton, Huaneng, BASF, General Electric, Siemens AG, Honeywell UOP, Sulzer, Equinor, Shell, JX Nippon (ENEOS), Carbonfree, Sinopec, Fluor Corporation. In 2024, the world's top five vendors accounted for approximately 40.73% of the revenue. The Point Source Carbon Capture Solution market has undergone significant evolution in recent years, driven by the increasing global demand for sustainable and innovative solutions to mitigate climate change. Historically, the CCU sector focused primarily on carbon capture technologies, with limited focus on utilizing captured CO₂ in productive ways. However, over the past decade, advances in CCU technologies have allowed for not only the capture but also the conversion of CO₂ into valuable products, ranging from synthetic fuels to chemicals and building materials. Early market adoption was fueled by government policies, environmental regulations, and the need for heavy industries to comply with emissions reduction targets. Currently, the Point Source Carbon Capture Solution market is

experiencing rapid growth, with key industries such as Oil and gas, power generation, cement, steel, and energy embracing carbon capture and utilization as essential elements of their sustainability strategies. Innovations in direct air capture (DAC) and bio-based conversion technologies are expanding the potential for CO₂ utilization. Furthermore, collaboration between private companies, governments, and research institutions has accelerated the development of commercial-scale Point Source Carbon Capture facilities, driving cost reductions and efficiency improvements. Looking forward, the future of the Point Source Carbon Capture Solution market is poised for substantial transformation. One of the most prominent trends is the continued development of economically viable utilization technologies that convert captured CO₂ into high-demand products, including chemicals, fuels, and consumer goods. The integration of renewable energy with carbon capture systems, such as using excess wind or solar power to power carbon capture processes, will also play a crucial role in enhancing the sustainability and cost-effectiveness of CCU technologies. As the global carbon market expands and more governments adopt stringent climate targets, the demand for Point Source Carbon Capture Solution solutions is expected to rise sharply, with carbon credits and incentives further boosting market dynamics.

The global Point Source Carbon Capture Solution market size was estimated at USD 4643.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
