Abstracts

Point-to-point IO-Link system is a manufacturer-independent point-to-point communication system used to connect sensors and actuators to an automation system. IO-Link is the first standardised IO technology worldwide for the communication with sensors and also actuators. The powerful point-to-point communication is based on the long established 3-wire sensor and actuator connection without additional requirements regarding the cable material.The increasing adoption of industrial automation across the globe is a major factor driving the market growth, with manufacturing becoming more digital and mechanized as big data, robotics, and virtual reality become more integrated. Traditional production is transforming into a smart factory with everything connected. Traditional sensors are thus made “smart” through IO-Link, allowing them to connect multiple parameters. In Industry 4.0 scenarios, engineers and maintenance technicians can collect more data from the factory floor. IO-Link allows users to collect output data and track it over time. IO-Link systems offer key benefits such as reduced wiring, remote configuration and monitoring, simple device replacement, increased data availability and advanced diagnostics, which are helping to drive market demand.

The global Point-To-Point IO-Link System market size was estimated at USD 13740.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.20% during the forecast period.
