Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Point-to-Point SerDes Chip competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Point-to-Point SerDes Chips are high-speed serializer/deserializer devices designed for automotive and communication applications, enabling end-to-end data transmission with low latency, high bandwidth, and strong interference resistance. They meet automotive-grade reliability and signal integrity standards, serving as core components in high-performance in-vehicle Ethernet, domain control, and communication systems. In 2024, production reached 222 million units with an average price of \$2.5 per unit. The single-line annual capacity is about 500,000 units, and the average gross margin is approximately 58%. The upstream segment includes silicon wafers, substrates, and packaging materials, as well as high-precision manufacturing equipment such as lithography, etching, and ion implantation machines, with representative suppliers including SUMCO, GlobalWafers, Shin-Etsu, ASML, Applied Materials, Lam Research, and Chinese companies such as Shanghai Silicon Industry Group, AMEC, and JCET. The midstream focuses on process and design implementation, encompassing physical-layer IP integration, analog front-end and mixed-signal circuit design, packaging and testing development, and validation of signal integrity and reliability. Downstream applications mainly involve commercial and passenger vehicles, with representative customers including Daimler, Volvo Trucks, Cummins, SAIC Motor, and Geely. Automotive-grade SerDes chips are positioned for accelerated adoption driven by the proliferation of multi-camera and multi-sensor ADAS/automated driving suites and the shift to high-bandwidth in-vehicle Ethernet architectures. Standardization efforts and open ecosystem initiatives are reducing integration friction and unit costs, while technical requirements for low latency,

deterministic links and automotive reliability create a high-barrier moat for qualified suppliers ? making SerDes not only a technical enabler for next-generation domain controllers but also an attractive, long-term market segment for semiconductor vendors and tier-1 suppliers.

The global Point-to-Point SerDes Chip market size was estimated at USD 554.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.00% during the forecast period.
