Report Overview

Polarization diversity receivers can be used as receivers in fiber-optic interferometers, which are susceptible to polarization fading due to random birefringence changes. The device contains three independently polarized PIN diodes, ensuring high interference visibility for at least one output. This approach eliminates polarization fading in fiber-optic interferometers without concomitant reduction in signal-to-noise ratio.

The global Polarization Diversity Receiver market size was estimated at USD 185.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
