## Abstracts

Polarization Entangled Photon Sources is a quantum optical device mainly used to generate photon pairs with mutually entangled polarization states. The polarization states of these photon pairs are interrelated at the quantum level. The measurement result of the polarization state of one photon can instantly determine the polarization state of another photon. Polarization-entangled photon sources are usually achieved through nonlinear optical processes such as spontaneous parametric down-conversion (SPDC), and they are an important foundation in the field of quantum information science such as quantum communication, quantum computing and quantum sensing.
