## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polarization-Maintaining Acousto-Optic Modulator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polarization-Maintaining Acousto-Optic Modulator (PM AOM) is an optical device that achieves beam intensity or frequency modulation based on the acousto-optic effect. It is specially designed to maintain the polarization state of the input light. The device introduces radio frequency sound waves into the crystal material to diffract the light beam at a certain angle and regulate its energy distribution while keeping the input light in a linear polarization state (usually fast axis or slow axis). PM AOM is widely used in precision optical systems that have extremely high requirements for polarization stability, such as optical fiber communications, lidar, quantum optics, and laser power control.

The global Polarization-Maintaining Acousto-Optic Modulator market size was estimated at USD 351.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
