Report Overview

A polarizer or polariser is an optical filter that lets light waves of a specific polarization pass through while blocking light waves of other polarizations. It can filter a beam of light of undefined or mixed polarization into a beam of well-defined polarization, that is polarized light. Polarizers can be divided into two general categories: absorptive polarizers, where the unwanted polarization states are absorbed by the device, and beam-splitting polarizers, where the unpolarized beam is split into two beams with opposite polarization states.

The global Polarizer Equipment market size was estimated at USD 9191.50 million in 2023 and is projected to reach USD 13542.25 million by 2032, exhibiting a CAGR of 4.40% during the forecast period.
