### Report Overview

Polarizing Beamsplitters are used to split unpolarized light into two polarized parts. Polarizing Beamsplitters are Beamsplitters designed to split light by polarization state rather than by wavelength or intensity. Polarizing Beamsplitters are often used in semiconductor or photonics instrumentation to transmit p-polarized light while reflecting s-polarized light. Polarizing Beamsplitters are typically designed for 0° or 45° angle of incidence with a 90° separation of the beams, depending on the configuration.
