The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pole Rod competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A hand rod is a fishing rod without a reel, usually used for freshwater fishing, especially suitable for nearshore or still water environments. It is used to fish by directly tying the fishing line to the tip of the rod. It is easy to operate and highly sensitive, and is widely used in traditional fishing methods. Modern hand rods are mostly made of carbon fiber or glass fiber materials, with the characteristics of light weight, high strength, and corrosion resistance. The length is generally between 2.7 meters and 8.1 meters, and some models can reach more than 10 meters. The design of the hand rod emphasizes precise control and quick response. It is suitable for fishing small and medium-sized fish such as crucian carp, carp, and grass carp. It is the preferred tool for fishing enthusiasts to get started and for leisure fishing.
