## Abstracts

Pole vault landing systems are specialized safety equipment designed to provide a cushioned and secure landing surface for athletes during pole vaulting events, consisting of a large, padded platform that absorbs the impact of a fall from significant heights. These systems are engineered with multiple layers of foam, often covered in durable, weather-resistant vinyl or synthetic materials, and must meet stringent safety standards set by governing bodies such as World Athletics and national sports federations to ensure optimal protection. Key features include portability for ease of setup and storage, modular designs to accommodate various competition levels, and high-visibility colors for clear demarcation of the landing area, making them essential for both training facilities and competitive venues to minimize injury risks and enhance athlete performance.

The global Pole Vault Landing Systems market size was estimated at USD 42.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.75% during the forecast period.
