Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Poliomyelitis Vaccation competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.The poliomyelitis vaccine is a biological preparation used to provide immunity against poliovirus, the causative agent of poliomyelitis (commonly known as polio). There are two main types of polio vaccines: Inactivated Poliovirus Vaccine (IPV), which is injected, and Oral Poliovirus Vaccine (OPV), which is administered orally. These vaccines stimulate the immune system to produce antibodies that neutralize the virus and prevent infection.The Poliomyelitis Vaccine market is primarily driven by global initiatives aimed at eradicating polio, supported by organizations such as the World Health Organization (WHO), Gavi, and the Global Polio Eradication Initiative (GPEI). Routine immunization programs and mass vaccination campaigns in endemic and high-risk regions continue to sustain demand for both oral polio vaccines (OPV) and inactivated polio vaccines (IPV). Increasing government funding, public health awareness, and international collaboration have significantly boosted vaccination coverage, especially in low- and middle-income countries. Technological advancements in vaccine production and improved supply chain logistics are also contributing to steady market growth.Despite considerable progress, the market faces challenges such as the emergence of vaccine-derived poliovirus (VDPV) cases, which are associated with the use of OPV in under-immunized populations. This raises concerns about vaccine safety and requires careful transition strategies to IPV. Additionally, logistical barriers—including poor infrastructure, political instability, and limited healthcare access in remote or conflict-affected areas—hamper effective vaccine delivery. Vaccine hesitancy and misinformation in certain communities also threaten immunization efforts. Maintaining funding and momentum in a declining disease landscape remains a critical hurdle to achieving

complete eradication and ensuring long-term market stability.
