## Abstracts

The pollution-free air stripper is an environmentally friendly device used to remove volatile organic compounds (VOCs) or harmful gases from liquids. Its working principle is to separate and remove pollutants by bringing the liquid into contact with clean air and utilizing the concentration difference between the gas and liquid phases to strip volatile substances from the liquid and transfer them to the gas phase. Compared with traditional chemical treatment methods, the pollution-free air stripper does not require the addition of chemical reagents, avoids secondary pollution, and has the characteristics of high efficiency, energy saving, and environmental protection. It is widely used in sewage treatment, chemical, pharmaceutical, food and beverage and other industries.

The global Pollution-free Air Stripper market size was estimated at USD 1253.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
